(54) Title: **FILTER ASSEMBLY COMPRISING FILTER ELEMENTS AND A FILTER GRID**

(57) Abstract: The invention pertains to a filter assembly comprising a plurality, preferably at least substantially vertically mounted, longitudinal elongated filter elements (7) that are suitable for separating fluid from solid particles, having an open upper end (2) sealed into a sealing device (8) and a closed bottom end attached to a filter support (10) that is mounted on a filter grid (11), characterized in that the filter grid (11) has a plurality of grid elements together (12) forming a grid, wherein at least a portion of the cross-section of the grid elements between two adjacent filter elements is pointiform. The invention further pertains to a filter grid and a filter vessel containing at least one filter assembly.
